

THE PROBLEM · GETTING THERE SHOULDN'T BE THE HARDEST PART OF GETTING BETTER

100K

Dialysis patients in Taiwan

3×

Hospital visits per week

130K

Caregivers who quit jobs

They don't lack medical care. They lack the ride.

Taxis are too expensive · Long-term-care vans have strict eligibility · After hours of dialysis, public transit is impossible

THE SOLUTION · SCHEDULED, SHARED, DOOR-TO-DOOR MEDICAL RIDES

Affordable Prices

Shared rides bring medical transport within reach for every recurring patient.

Caregivers Get Their Life

Families stop quitting jobs to chauffeur. Time, income & sanity returned.

Clinics Gain Capacity

On-time arrivals reduce no-shows; clinics serve more patients per slot.

BUSINESS MODEL · A MARKET WITHOUT A PLATFORM

Revenue Streams

▶ User fares (micro-profit)
▶ B2B partnerships with medical institutions

Strategic Partners

▶ Transit operators (monetising idle assets)

Why Now

Taiwan hit **super-aged status in 2025**. Recurring medical trips are exploding while Long-Term-Care vans serve only the eligible few and taxis stay out of reach. The category has **no consumer platform** — and the same demographic wave hits Japan, Korea & HK next.

Defensibility

Shared-ride matching on predictable medical schedules + **B2B integration** with clinics creates a two-sided flywheel that taxis and LTC vans structurally cannot replicate.

TAM · GLOBAL

US\$137B

Global Healthcare Transportation Services market

SAM · ASIA

US\$13B

Super-aged & aged countries like Taiwan

SOM

US\$4.6M

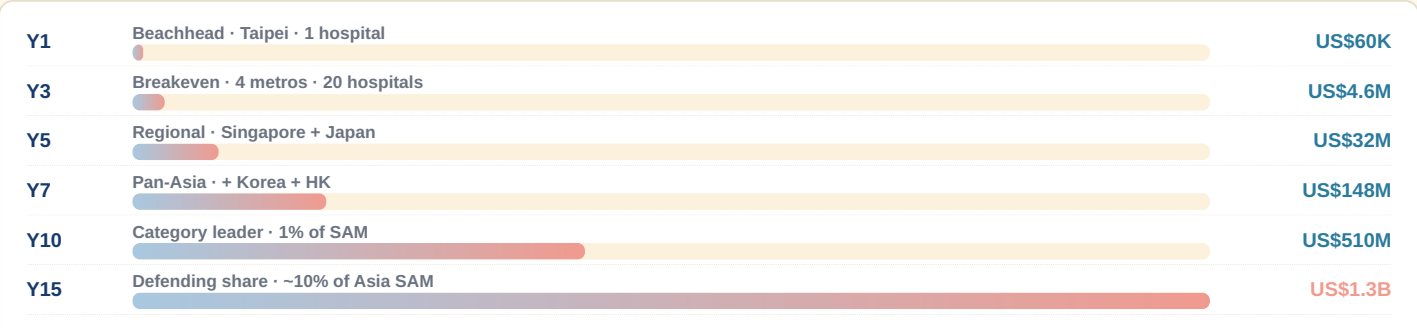

4 Taiwan metros · 20 hospitals

BEACHHEAD

1 Hospital · Taipei · Dialysis MWF patients

3M+ Taiwanese on recurring care · 32.5M patients across aging Asia

REVENUE TRAJECTORY · 15-YR S-CURVE (TAIWAN → SINGAPORE → JAPAN → KOREA → HK)

Bottom-up SAM: 32.5M patients (recurring + acute) × 35 trips/yr × US\$11/trip blended = US\$13B Asia SAM · 90% still untapped at Y15
